Rio is 23 years old and works as a consultant in Manchester. He works long hours in a high-pressure consulting role. He trains 4–5 times per week, mixing strength training and endurance sessions. He is focused on improving performance, not just aesthetics. Due to his demanding schedule, he values data that helps him optimise recovery, sleep, and training intensity. He sees health as an investment in his productivity and career longevity.

WHOOP®

	Awareness	Consideration	Purchase	Usage	Loyalty
Action	Rio is looking for a fitness product that provides detailed and accurate performance insights, particularly around recovery and sleep tracking. During this stage, he discovers the Whoop brand through platforms such as Strava and MyFitnessPal, influenced by targeted data and cookies.	Rio begins comparing different wearable devices, including the Apple Watch Series 10 and WHOOP 5.0. The one-month free trial offered by Whoop allows him to experience the product fully, which becomes a key deciding factor.	After the free trial, Rio continues his usual training routine and is able to accurately track his sleep and recovery. He is satisfied with the results and sees that the product meets his requirements, leading him to purchase the subscription.	Following a strong initial experience, Rio commits to an annual subscription and actively uses the product. The data becomes increasingly personalised based on his usage during the trial period, improving the relevance of insights.	After seeing consistent improvements, Rio begins recommending the product to his network. He shares his data through platforms such as Strava, effectively acting as a promoter of the product through his own experience.
Touchpoints/Influences		 			Rio is influenced by long-form content such as podcasts, particularly one featuring Bryan Johnson, which introduces the importance of data-driven health, recovery, and performance optimisation. This shapes his mindset towards tracking and improving his physical performance through measurable insights. This is reinforced through platforms like Strava and MyFitnessPal, where he sees users sharing performance data, increasing his awareness and interest in Whoop.	Rio compares wearable devices such as the Apple Watch Series 10 and WHOOP 5.0, focusing on which best supports his performance goals. A key touchpoint is the Whoop "1 month free trial", which reduces risk and allows him to test the product. Reviews, athlete endorsements, and user-generated performance data further influence his decision by providing tangible proof of the product's value.	Rio's decision is driven by his experience during the free trial, where he tracks sleep, recovery, and training, and sees measurable improvements by following personalised recommendations. Email reminders and app notifications reinforce the transition to a paid subscription, and by the end of the trial, the product is integrated into his routine, leading to a confident purchase decision.	Key touchpoints include the Whoop mobile app interface, where Rio interacts with real-time data on sleep, recovery, and receives personalised recommendations. The continuous feedback loop and clear data visualisation influence his behaviour, encouraging consistent engagement. Notifications and daily insights further reinforce usage by prompting action and maintaining accountability.	Touchpoints such as Strava integration and social sharing influence Rio's loyalty, as he engages with a wider community and sees others using the product. The refer-a-friend feature and exposure to user-generated content strengthen trust and encourage advocacy. Ongoing app insights and performance tracking continue to reinforce the product's value, sustaining long-term commitment.
